

To install the scope stand clamp system, remove the center plug from the bottom of your Ray-Vin scope stand by unscrewing the setscrew that comes in from the side. Replace the old plug with the new axle grip plug. Align the axis of the axle grip with the set-screw. By looking at the location of the setscrew you will be able to align the grip onto the axle later. **Be sure the set screw passes through the hole in the scope shaft.**

Attach the scope clip, top, centered and facing out, to the handle of your Ray-Vin shooting cart with the hose clamp provided.

To attach the scope stand to the shooting cart, fold up the legs and place the axle grip on the center of the axle while leaning the scope shaft to one side. Now press down and rock the shaft into the scope clip at the handle. You can use the shaft as a tow handle.

To remove the scope stand from the cart reverse the above procedure. Help the shaft out of the scope clip by prying it with your thumb while pulling it away. Continue rocking the shaft until the bottom breaks free. Deploy your scope and shoot 10's & X's
